

**Project Acronym :** BIOENERGY IN MOTION

**Project Title :** Production of a movie to accelerate the uptake of innovative bioenergy technologies for heating and cooling

**Coordinator :** BTG - Biomass Technology Group BV (Netherlands)

**Website :** <http://www.bioenergy-in-motion.com/>

## ABSTRACT

The main objective of Bioenergy in motion is to increase the deployment of new and innovative biomass heating and cooling technologies and systems in the EU. To help overcome the barriers to their wider deployment, a movie was made showcasing successful bioenergy technologies and flagship projects completed in recent years. The movie shows various small-and medium- scale applications and illustrates the merits and possibilities of different technologies. It addresses the practical potential and possibilities, investment opportunities, and the policy context of these bioenergy systems. Three country-tailored versions of the movie were made, covering Bulgaria, Estonia and the Czech Republic respectively. The movies is distributed on DVD among end users, investors and government authorities. A number of showings at (inter)national events were organised.
